PROFILE

Final-year Software Engineering student who builds complete, working products — from the interface down to the data and logic underneath. Currently building **PocketBalance**, an Android finance app that turns bank SMS messages into a live balance, with an AI copilot for reports and questions. Looking for an internship or junior software engineering role, with a strength in frontend and mobile development.

PROJECTS

PocketBalance — personal finance Android app

2026 – Present · In development

React Native (Expo) · TypeScript · SQLite · Supabase · Reanimated

- Built an Android app that reads bank **SMS messages** and turns them into clean transactions and a running balance — no bank API and no manual entry.
- Designed a strict SMS parser that identifies the bank and account behind each message, with duplicate protection, balance reconciliation, and recovery of missed messages.
- Added **merchant learning**: transactions from known merchants are categorized automatically, while unclear ones are sent to a quick review instead of being guessed.
- Building an **AI copilot** that generates monthly financial reports with written insights, exports them to PDF and CSV, answers spending questions in plain language, and adds cash expenses from typed text.
- Local-first data in SQLite with a biometric app lock, cloud backup and device recovery, and full English / Arabic support.
- Backed by **189 automated test files** covering the parser, ledger, and recovery flows.

Personal portfolio website — interactive showcase

2026

Next.js · TypeScript · Tailwind CSS · Motion

- Designed and built a multi-page portfolio with cinematic page transitions, a cursor-reactive canvas background, and scroll-driven animation.
- Recreated PocketBalance's screens as a working web replica — visitors can send it simulated bank messages and categorize transactions in the browser.
- Tuned for mobile performance and accessibility, including reduced-motion support.

EDUCATION

Modern Sciences and Arts University (MSA)

Expected June 2027

B.Sc. Computer Science, major in Software Engineering · GPA 3.5 / 4.0 · 6th of October, Giza

- Built several course projects in **Python, Java, and C++**, and several websites with **HTML, CSS, and JavaScript**.

SKILLS

Programming	TypeScript, JavaScript, Python, Java, C++, HTML, CSS · basic C#
Frontend & mobile	React, React Native (Expo), Next.js, Tailwind CSS, Motion / Reanimated, Android development
Data & backend	SQLite, Supabase
Practices	Automated testing, Git & GitHub, UI/UX and interaction design
Languages	Arabic (native), English (professional working proficiency)
